The instant invention is directed towards a plurality of physically separated player-machines wherein each physically separated player-machine includes its own microprocessor and software for allowing a player to play a game that requires sufficient skill that is not a game of chance. The player is provided a game due to an economic consideration where digital information is developed resulting from play wherein each player machines includes a wheel-shaped indicator having a plurality of segments and each segment of the wheel-shaped indicator is individually detectable by a detector of each player machine and a bonus apparatus including a microprocessor and software that is physically separated from the plurality of player-machines and coupled to the player machines for digital communication. The game information and award information associated with the at least one game is associated is generated based on two or more

differing non-monetary criteria from the at least one game played at a player machine of the plurality of player machines.

4. The prior art of record, in Sitrick teaches a plurality of gaming machines that provide digital communication between the two individual game machines is provided and is not a game of chance. However, the machines do not include a wheel-shaped indicator with a plurality of segments that are individually detectable by a detector of each player-machine.

5. The prior art of Ishida, teaches a bonus apparatus that is connected between a plurality of player machines however is directed towards the digital information resulting from a game of chance rather than a skill game.
